

*Start a new life,
free from vitiligo symptoms*

Treatment
evolution after
a few sessions
with XTRAC

XTRAC™
Light years ahead

**THE LASER SOLUTION
FOR VITILIGO**

You must know about the XTRAC laser. The same technology used in ophthalmology to correct myopia now revolutionates the treatment of vitiligo. You can have that freedom today. With XTRAC you will find an effective method for vitiligo treatment light years ahead of other therapies. Live your life fully. Ask your doctor today about XTRAC laser treatment.

Treatment evolution after a few sessions with XTRAC

XTRAC laser treatment promotes effective relief

If you suffer from vitiligo, you already know the frustration that white skin spots without effective treatment can cause. At last you may be able to enjoy effective relief from the unsightly symptoms of vitiligo. With the revolutionary XTRAC you can feel good about yourself again. The treatment sessions last just a few minutes. They are completely painless and require no ancillary oral medication.

XTRACTM
Light years ahead

How is XTRAC different?

The XTRAC system is light years ahead of other vitiligo treatments. By using a carefully focused beam of laser light through a sophisticated fiberoptic device, XTRAC can treat vitiligo quickly and effectively. XTRAC uses just the necessary doses to stimulate the melanocytes without the exposure of the healthy skin, which occurs in conventional phototherapy.

What is the treatment like?

The treatment is done once or twice a week. Applications last 5 minutes on average without any risk of skin burn. As it is completely painless it can be recommended for children.

Is the treatment definitive?

Yes. After the treatment, only 5% of the skin spots may come back again. However these can be treated in new sessions.

Does XTRAC remove other kinds of skin white spots?

Yes. XTRAC is one of the first therapeutic options truly effective for depigmentation caused by surgical scars, stretch marks, burnings, injury from trauma or even other laser skin resurfacing.
